

Week 3 – day 2

Integrate the Jira with this existing codebase

The screenshot shows a web application titled "User Story to Tests" with the subtitle "Turn user stories into comprehensive, structured test cases in seconds." The interface is divided into two main sections. On the left, there is a form for entering user story details, including fields for "Story Title", "Description", "Acceptance Criteria", and "Additional Info". A "Connect Jira" button is located at the top of this form, and a "Generate Test Cases" button is at the bottom. On the right, there is a placeholder box titled "Your test cases will appear here" with instructions to fill in the story details and hit Generate. Below this box are four buttons: "Positive", "Negative", "Edge", and "Authorization".

This screenshot shows the same "User Story to Tests" application, but with the "Connect Jira" modal open. The modal is a white box with a close button in the top right corner. It contains three input fields: "Jira Base URL" (with the placeholder "https://your-domain.atlassian.net"), "Email ID" (with the placeholder "you@company.com"), and "Jira API Token" (with the placeholder "Paste your API token"). A green "Connect" button is at the bottom of the modal. The background of the application is dimmed.
