Final results: section 6.

1. Candidate search — AI Search (default mode)

AI Search runs the complete RAG pipeline: BM25 keyword search and vector search in parallel, merging, de-duplication (by resume and by person), LLM re-ranking with a reason for each candidate, and summaries of the shortlist. All data in this section comes from the live backend, MongoDB Atlas and Groq.

Figure 1. Home screen

Live data docs/screenshots/01-home.png

The search page on first load. The sidebar shows the TalentLens AI logo, the four search modes with **AI Search** selected by default, the results limit (top 5), **Upload resumes** and, at the bottom, the version and the **How it works** guide link.

The top bar repeats the active mode as a large blue badge. The welcome message explains each mode, four suggestion chips start a search with one click, and the input bar has **Clear** and **Send** next to each other.

Figure 2. AI Search in progress (loading message)

Live data docs/screenshots/02-ai-loading.png

Query: “Selenium automation tester with Java”. While the request runs, the bot shows “Searching resumes, removing duplicates and re-ranking with AI...” with an elapsed-seconds counter (here 2 s).

AI Search is one backend request, so the message describes the whole pipeline instead of showing fake per-step progress.

Figure 3. AI Search results — re-ranked, de-duplicated and summarized

Live data docs/screenshots/03-ai-results.png

The screenshot displays the results of an AI search for candidates. At the top, a header indicates 'Found 5 candidates' and 'AI Search' took 3.4 seconds. Below this, a breadcrumb trail shows the process: '40 retrieved' → '28 unique resumes' → 'top 10 re-ranked by AI' → '5 shown'. An 'AI summary' box provides an overview: 'All shortlisted candidates possess Selenium and Java experience, meeting the core requirement for a Selenium automation tester role. The candidate with the most extensive automation background and senior-level experience is Sharmila NKS, who brings 8 years of testing, multiple frameworks, and CI/CD exposure. Other candidates also fit but show shorter experience spans or fewer framework details, which may limit senior-level suitability.'

The results list five candidates, each with a relevance score and a detailed summary:

- #1 Theegela Sahitya Bharathi** (0.95 Relevance): Test Engineer - Accenture. 4.3 yrs. Summary: 'Theegela Sahitya Bharathi has 4.3 years of manual and automation testing, with Selenium WebDriver (Java), TestNG, Maven and CI/CD tools like Jenkins. The profile includes a solid mix of testing types but lacks mention of advanced framework design or extensive API testing.'
- #2 Srividhya V** (0.90 Relevance): Business Execution Associate - Wells Fargo. 5.5 yrs. Summary: 'Srividhya V shows recent experience at Wells Fargo with Selenium, Java, TestNG, Cucumber and BDD, plus Agile exposure. The resume highlights both manual and automation work but provides limited detail on framework development or CI/CD integration.'
- #3 Sharmila NKS** (0.88 Relevance): Senior Test Engineer - Tata Consultancy Services. 8 yrs. Summary: 'Sharmila NKS offers 8 years of test engineering, strong Selenium and Java expertise, and extensive use of frameworks such as TestNG, Cucumber, POM, and JUnit, along with CI/CD tools like Jenkins and GitHub. This depth of experience aligns closely with senior automation tester expectations.'
- #4 GEANT CLEMENT RADJE** (0.85 Relevance): Senior Test Engineer - State Bank of India. 4 yrs. Summary: 'GEANT CLEMENT RADJE brings 4+ years of automation using Selenium, Java, and Playwright, plus TestNG, BDD, and CI/CD tools. The candidate demonstrates cross-browser and API testing skills, though framework details are less extensive than the senior candidate.'
- #5 MURALIKRISHNAN S** (0.83 Relevance): Quality Analyst - Elumina E-Learning Services Pvt Ltd. 2 yrs. Summary: 'MURALIKRISHNAN S has 2+ years of Java-based Selenium automation, TestNG, and API testing with Postman, plus Agile experience. The profile shows solid fundamentals but limited senior-level framework or CI/CD exposure.'

Pipeline header: 40 retrieved (20 BM25 + 20 vector) → 28 unique resumes → top 10 re-ranked by AI → 5 shown, in 3.4 s. 40 hits became 28 because 12 resumes were found by both searches and merged.

AI summary: one paragraph comparing the shortlist (who fits best and common gaps), produced by a single LLM call after the results were displayed.

Cards (ranked #1–#5, relevance 0.95 → 0.83): each shows role and company, *Keyword match / Semantic match* chips (which search found it), experience, email and phone, a **Why this match** reason from the re-ranker, a 2–3 sentence fit summary, and skills with the query terms (Selenium, Java) highlighted first.

Figure 4. Result card in detail

Live data docs/screenshots/04-ai-card.png

The screenshot shows a candidate result card for Theegela Sahitya Bharathi. At the top left is a blue circle with the rank "#1". To its right is the candidate's name "Theegela Sahitya Bharathi" in bold, followed by their role and company "Test Engineer · Accenture". On the top right, a purple pill-shaped badge displays "0.95 Relevance". Below the name, there are two match indicators: "Keyword match" and "Semantic match", both with star icons. To the right of these are "4.3 yrs" of experience and an email address "t.sahithyabharathi24@gmail.com". A phone number "7993245519" is listed below. A purple box contains the text "Why this match: Test Engineer role with Selenium WebDriver and Java experience, plus TestNG and related automation tools." Below this is a paragraph summarizing the candidate's profile: "Theegela Sahitya Bharathi has 4.3 years of manual and automation testing, with Selenium WebDriver (Java), TestNG, Maven and CI/CD tools like Jenkins. The profile includes a solid mix of testing types but lacks mention of advanced framework design or extensive API testing." At the bottom, a list of skills is shown in pills: "Selenium" and "Java" are green, while "Manual Testing", "Automation Testing", "Functional Testing", "Regression Testing", "Smoke Testing", and "System Testing" are grey. The list ends with "+15 more".

#1 **Theegela Sahitya Bharathi** 0.95 Relevance
Test Engineer · Accenture

Keyword match Semantic match 4.3 yrs t.sahithyabharathi24@gmail.com
7993245519

Why this match: Test Engineer role with Selenium WebDriver and Java experience, plus TestNG and related automation tools.

Theegela Sahitya Bharathi has 4.3 years of manual and automation testing, with Selenium WebDriver (Java), TestNG, Maven and CI/CD tools like Jenkins. The profile includes a solid mix of testing types but lacks mention of advanced framework design or extensive API testing.

Selenium Java Manual Testing Automation Testing Functional Testing Regression Testing
Smoke Testing System Testing +15 more

Rank badge, candidate name (button that opens the profile), role · company and the AI relevance score (0.95). The purple box is the re-ranker's one-sentence reason; the paragraph below is the candidate's fit summary, including gaps. Matched skills are green; the rest of the skill list is grey with "+15 more".

Figure 5. De-duplication of repeated results (same person, two resumes)

Live data docs/screenshots/06-ai-dedup.png

The screenshot displays the TalentLens AI search results interface. At the top, it indicates 'Found 3 candidates' with a search time of '2.4 s'. A progress bar shows '25 retrieved' > '22 unique resumes' > '1 duplicate resume merged' > 'top 10 re-ranked by AI' > '3 shown'. Below this is an 'AI summary' section explaining that the shortlist contains one candidate matching the name (Gayathri H) but with experience, and two true freshers. The main results list three candidates:

- #1 Gayathri H** (0.90 Relevance): Assistant Manager Operations - Axis Bank. Keyword match, Semantic match, 1 yrs experience. Why this match: Matches the name Gayathri and has relevant operations experience. Skills: Leadership, Project Management, Resource Allocation, Data Analysis, Customer Service Excellence.
- #2 Aruna Sakthivel** (0.70 Relevance): Business Trainee - Bajaj FinServ Asset Management Company. Keyword match, 0.8 yrs experience. Why this match: Fresher with MBA in Finance and strong accounting/financial skills. Skills: Excel, VLOOKUP, Pivot Tables, Basic Formulas, Basic Accounting, Financial Records, Financial Statement Understanding, KYC Process Support, +3 more.
- #3 Swetha S** (0.65 Relevance): MBA fresher with finance specialization and analytical skills. Keyword match, Semantic match, 0 yrs experience. Why this match: MBA fresher with finance specialization and analytical skills. Skills: Financial analysis, Excel, Power BI, MS Word, MS PowerPoint, MS Access, Visual Basic, Tally ERP 9, +9 more.

The interface also shows a '+1 more resume' link for Gayathri H and a file path 'Also on file: Naukri_Gayathrihemachandran[0y_0m] (1).pdf'.

Query: "Gayathri Hemachandran fresher". Pipeline: 25 retrieved (5 BM25 + 20 vector) → 22 unique resumes → **1 duplicate resume merged** → top 10 re-ranked by AI → 3 shown, in 2.4 s.

The database holds two different files for this person. Both were retrieved, recognised as the same person (same email) and shown once. The AI summary explains that the name matches but the experience does not fit "fresher", and ranks two actual freshers next.

Figure 6. Card of a person with more than one resume

Live data docs/screenshots/07-dedup-card.png

#1

Gayathri H

Assistant Manager Operations · Axis Bank

0.90 Relevance

Keyword match

Semantic match

1 yrs

gayathrihemachandranj@gmail.com

6369420637

Why this match:

Matches the name Gayathri and has relevant operations experience

Gayathri H has strong leadership, project management and customer service experience at Axis Bank, indicating senior-level capability rather than a fresher profile. The candidate's skill set is valuable for operations roles but does not align with a fresh graduate position.

Leadership

Project Management

Resource Allocation

Data Analysis

Customer Service Excellence

+1 more resume

Also on file: Naukri_Gayathrihemachandran[0y_0m] (1).pdf

"**+1 more resume** — Also on file: Naukri_Gayathrihemachandran[0y_0m] (1).pdf". The best-ranked resume is kept; the other one is listed instead of appearing as a second, identical candidate.

Figure 7. Candidate profile

Live data docs/screenshots/05-profile-modal.png

Clicking a card opens the full profile from `GET /v1/resumes/:id`: name, role · company, contact (email, phone, location), all skills, total experience with the experience summary and job-title timeline, and education. **Esc**, the close button or a click outside closes it.

2. Candidate search — Vector, BM25 Keyword and Hybrid

The original retrieval modes are kept for comparison with AI Search. They show the raw ranking of each strategy without LLM re-ranking. All data is live.

Found 5 candidates · AI Search · 80 ms

40 retrieved > 28 unique resumes > AI re-ranking skipped > 5 shown

⚠️ AI re-ranking is unavailable right now, so results are in search-score order without match reasons.

AI summary

The candidates with strong Selenium and Java automation experience are Theegela Sahitya Bharathi, Sharmila NKS, and GEANT CLEMENT RADJE, each showing several years of relevant testing and framework development. Srividhya V also meets the core skill set but has less overall experience, while Karthik S lists Selenium and Java but focuses more on manual and performance testing, indicating a weaker fit. Common gaps include limited mention of advanced CI/CD pipeline integration beyond Jenkins for some candidates and minimal exposure to newer tools like Docker or cloud-based testing platforms.

#1 Sharmila NKS 9.91 BM25 Score
Senior Test Engineer · Tata Consultancy Services

Keyword match Semantic match 8 yrs 8778351584

Sharmila NKS brings 8 years of automation experience, strong Selenium and Java expertise, and extensive framework work with TestNG, Cucumber, POM and CI/CD via Jenkins. The candidate fits the query well, though no specific mention of cloud or container-based testing environments.

Selenium Java JavaScript TestNG Cucumber Page Object Model Data-Driven JUnit

#2 Karthik S 9.69 BM25 Score
Software Tester · Capgemini Technology Services India Ltd

Keyword match Semantic match 5 yrs karthiksakthivel2504@gmail.com
8807082504

Karthik S lists Selenium and Java among many testing skills, yet the focus is on manual, performance and API testing with limited automation depth. The candidate meets the basic skill requirement but shows a gap in advanced Selenium framework development and CI/CD experience.

Press Enter to search · Shift+Enter for new line

If the LLM re-ranker fails (for example Groq's rate limit), results are still returned in search-score order. The pipeline says **"AI re-ranking skipped"**, an amber notice explains why there are no match reasons, and each card shows its BM25 score instead of an AI relevance score.

The time shown is for a replayed response and is not representative.

Figure 14. Summary failure with Retry

Simulated (HTTP 502 SUMMARIZATION_FAILED)

docs/screenshots/14-summary-error.png

The screenshot shows the TalentLens AI interface. At the top, it says "TalentLens AI" and "AI Search · Re-ranked and summarized". On the right, there is a button labeled "AI Search". Below the header, it says "Found 5 candidates · AI Search · 104 ms". There are filters: "40 retrieved", "28 unique resumes", "top 10 re-ranked by AI", and "5 shown".

The main content area shows an "AI summary" card with the message: "Summary unavailable. The AI could not summarize these candidates right now." Below this is a "Retry summary" button.

Below the summary card are three candidate cards:

- #1 Theegela Sahitya Bharathi** (0.95 Relevance)
Test Engineer · Accenture
Keyword match, Semantic match, 4.3 yrs, t.sahityabharathi24@gmail.com, 7993245519
Why this match: Test Engineer with 4.3 years experience using Selenium WebDriver and Java for automation testing.
Summary unavailable for this candidate.
Skills: Selenium, Java, Manual Testing, Automation Testing, Functional Testing, Regression Testing, Smoke Testing, System Testing, +15 more
- #2 Srividhya V** (0.93 Relevance)
Business Execution Associate · Wells Fargo
Keyword match, Semantic match, 5.5 yrs, srividhya.maniam@gmail.com.com, 8870003334
Why this match: SDET role with Selenium, Java, TestNG and extensive automation testing skills.
Summary unavailable for this candidate.
Skills: Selenium, Java, TestNG, Cucumber, SQL, Jira, Git, Agile, +6 more
- #3 Sharmila NKS** (0.92 Relevance)
Senior Test Engineer · Tata Consultancy Services
Keyword match, Semantic match, 8 yrs, 8778351584
Why this match: Senior Test Engineer with 8 years of Selenium and Java automation experience.

At the bottom, there is a search bar with the text "Describe the candidate you need, e.g. Selenium tester with 3 years of experience". To the right of the search bar are "Clear" and "Search" buttons. Below the search bar, it says "Press Enter to search · Shift+Enter for new line".

If the summaries request fails, the ranked results, scores and match reasons stay on screen. The AI summary card shows “**Summary unavailable.** The AI could not summarize these candidates right now.” with a **Retry summary** button, and each card says “Summary unavailable for this candidate.”

4. Resume ingestion

The upload page sends one PDF to `POST /v1/resume/inject`, which checks for duplicates (SHA-256), extracts the text (OCR for scanned PDFs), parses it with the Groq LLM, creates a Mistral embedding and stores everything in MongoDB Atlas. The sample used for a new ingestion is a fictional test resume (*zara-testwell-e2e.pdf*), which was deleted from the database after the screenshots.

Figure 15. Upload page

Live data docs/screenshots/16-ingestion-empty.png

Drag-and-drop area or **Browse / Select PDF** (PDF only, up to 5 MB), the **Upload Resume** button, and the list of processing stages: Resume Upload, PDF Processing, Resume Parsing, Embedding Generation, MongoDB ingestion, Completed.

Figure 16. File selected

Live data docs/screenshots/17-ingestion-selected.png

The selected file (zara-testwell-e2e.pdf, 44 KB) passed the PDF and size checks; the status reads “Ready to upload”.

Figure 17. Ingestion in progress

Live data docs/screenshots/18-ingestion-progress.png

The file has been sent (Resume Upload ✓) and the server is processing it. The button shows “Uploading...” and is disabled, so the same file cannot be submitted twice.

Figure 18. Ingestion completed

Live data docs/screenshots/19-ingestion-success.png

"Resume ingestion completed" with the file name and the new resume id. Every stage is ticked and shows the server's measured time: PDF processing 1,864 ms, parsing 1,899 ms, embedding 583 ms, MongoDB 379 ms. The resume is immediately searchable.

Figure 19. Same file uploaded again — already ingested

Live data docs/screenshots/20-ingestion-duplicate.png

A resume that is already stored (C-Priyanka QA Automation resume.pdf) is recognised by its SHA-256 fingerprint. Nothing is re-processed: the processing stages are marked “already ingested” and the existing resume id is shown.

Figure 20. Validation — not a PDF

Live data docs/screenshots/21-ingestion-invalid-type.png

The screenshot displays the TalentLens AI Resume ingestion interface. At the top, the TalentLens AI logo is on the left, and a search bar with the text "Go to candidate search" is on the right. Below the logo, the heading "Resume ingestion" is followed by the instruction "Upload a resume PDF to make it searchable." The main area features a large dashed box with a cloud upload icon and the text "Drag & drop a resume PDF here" and "PDF only, up to 5MB". Below this is a "Browse / Select PDF" button. A prominent blue "Upload Resume" button is positioned below the dashed box. At the bottom, a section titled "Only PDF allowed" lists the ingestion steps: Resume Upload, PDF Processing, Resume Parsing, Embedding Generation, MongoDB ingestion, and Completed. All steps are preceded by radio buttons, indicating a selection or status tracking mechanism.

Choosing a .txt file is rejected in the browser before any upload: **“Only PDF allowed”**.

Figure 21. Validation — file too large

Live data docs/screenshots/22-ingestion-too-large.png

A 6 MB PDF is rejected before upload: **"Maximum 5MB allowed"**.

Figure 22. Server error with Retry

Simulated (HTTP 422 "Resume extraction failed")

docs/screenshots/23-ingestion-error.png

When the server cannot read a PDF, the error names the failed stage ("PDF extraction failed"), the stage list marks PDF Processing with X, and the user can **Retry** or **Choose Another File**. Parsing, embedding, storage and network failures are mapped the same way.

5. Other features

The in-app guide and the mobile layout. The mobile search screens replay the recorded AI Search response (no extra LLM calls).

Figure 23. How it works — in-app guide

Live data docs/screenshots/15-help.png

Opened from **How it works** next to the app name. Sections: Quick start (6 steps), Search modes (what each mode is best for and what its score means), How it works (upload pipeline and each search mode, including de-duplication and AI ranking) and Tips.

Figure 24. Mobile — AI Search results

Replayed docs/screenshots/24-mobile-results.png

390 px wide phone. The top bar keeps the menu button, logo and mode badge; the pipeline chips and AI summary wrap to the screen width. Nothing scrolls sideways (checked at 375 px on every page).

Figure 25. Mobile — sidebar drawer

Live data docs/screenshots/25-mobile-drawer.png

On small screens the sidebar becomes a drawer opened from the menu button, with the same modes, results limit, upload link and guide link. Escape or the close button closes it.

TalentLensAI

Resume ingestion

Upload a resume PDF to make it searchable.

Q Go to candidate search

Drag & drop a resume PDF here

PDF only, up to 5MB

Browse / Select PDF

Upload Resume

No file selected

- ☐ Resume Upload
- ☐ PDF Processing
- ☐ Resume Parsing
- ☐ Embedding Generation
- ☐ MongoDB ingestion
- ☐ Completed

The upload card, buttons and stage list use the full width; the “Go to candidate search” link wraps below the title.

6. Final results

TalentLens AI ingests resumes end to end and finds candidates with four search modes. The default **AI Search** combines keyword and semantic retrieval, removes repeated resumes of the same person, re-ranks candidates with an LLM that explains each match, and summarizes the shortlist. Every requirement of the enhancement brief is covered:

Requirement	Delivered	Shown in
Re-ranking of retrieved resumes	Groq LLM re-ranks the top 10+ candidates with a 0–1 relevance score and a one-sentence reason	Figures 3, 4
Deduplication of repeated results	Same resume found by both searches merged; same person with several resume files shown once (“+1 more resume”)	Figures 3, 5, 6
Summarization of the final results	Overall shortlist summary plus a fit summary per candidate, in one LLM call	Figures 3, 5
Complete end-to-end pipeline integration	Upload → parse → embed → store → retrieve → merge → de-duplicate → re-rank → summarize, all reachable from the UI	Figures 2–7, 15–19
Display all relevant results clearly	Pipeline counts, scores, match sources, reasons, summaries, matched skills, contact details, full profile	Figures 3–10
Responsive design	Layouts wrap on phones; drawer sidebar; no horizontal scrolling at 375 px	Figures 24–26
Loading, success, validation and error messages	Loading line with timer, success screens, query and file validation, friendly errors with Retry, degraded notices	Figures 2, 11–14, 16–22

Verification

Check	Result
Backend unit tests (<code>npm test</code>)	48 / 48 pass
Frontend unit and component tests (Vitest)	56 / 56 pass
Type checks, lint, production build	Pass
Browser scenario — AI Search, against the live backend and Groq	30 / 30 checks pass
Browser regression — frontend phases 7–15	All pass
Postman (Newman) — retrieval Phase 19	7 requests, 21 / 21 assertions pass

Sample results from the live data

Search	Pipeline	Top result
AI Search — “Selenium automation tester with Java”	40 retrieved → 28 unique → top 10 re-ranked → 5 shown, 3.4 s	Theegela Sahitya Bharathi, relevance 0.95
AI Search — “Gayathri Hemachandran fresher”	25 retrieved → 22 unique → 1 duplicate merged → top 10 re-ranked → 3 shown, 2.4 s	Gayathri H, relevance 0.90, +1 more resume

Vector — “QA automation engineer with Selenium and Java”	5 results, 1.2 s	Theegela Sahitya Bharathi, similarity 0.90
BM25 — “Selenium TestNG Jenkins”	5 results, 418 ms	Sharmila NKS, BM25 11.89
Hybrid 30/70 — “Java backend developer AWS cloud”	5 results, 1.1 s	Thangameena, hybrid 1.00
Ingestion — fictional test resume	Extract 1,864 ms · parse 1,899 ms · embed 583 ms · store 379 ms	Ingested, then deleted

Known limit: Groq's free tier allows 8,000 tokens per minute per key; each AI Search makes two LLM calls, so a quick series of searches can trigger the “re-ranking unavailable” notice or the summary Retry (Figures 13–14) instead of an error.
